

Critical Fire Management resources

National and Regional Preparedness are at Level 5. There is high competition for resources including crews, helicopters, and management overhead in Northern California with priorities being set at the GACC Level. Fires with a higher threat to WUI are the highest priority. Critical resources needed to implement this alternative are crews and aviation resources and sufficient overhead to implement tactics and strategies

Special considerations

Long term impacts to wilderness, introduction of noxious weeds, and riparian reserves that are fisheries and cold water refugia for anadromous and resident fish are of primary concern. Wildland Urban Interface, major travel corridors, introduction of Port Orford Cedar root disease, Wild and Scenic River corridors values are items of special concern.
